

FROM AN $osp(32|1)$ SUPERGRAVITY TO AN M-ALGEBRA GAUGE THEORY

MOKHTAR HASSAÏNE

ABSTRACT. Starting from an eleven-dimensional AdS supergravity which is gauge theory for the super group $osp(32|1)$, we obtain a gauge supergravity for the M-algebra through a generalization of the Wigner-Inönü contraction. This link is established at the level of the super algebras and the supersymmetric actions.
